PROFESSIONAL SUMMARY

Senior/Lead Backend Software Engineer with 10+ years building scalable, cloud-native distributed systems, primarily in Go, across high-scale Argentine fintech (Ualá, MODO, Mercado Libre). Specialized in event-driven and serverless architectures, observability, and internal tooling with measurable impact (transaction query from 3 s to 300 ms, +45% development speed, MTTA from 10 to 2 minutes). I keep my own R&D track in AI agents with verifiable orchestration (Gitar and Mado). Comfortable shipping to production frequently and leading technically.

PROFESSIONAL EXPERIENCE

Senior Software Engineer, MODO *Jan 2026 - Jun 2026*

- Designed and implemented a cross-team quality and delivery dashboard for the engineering squads, tracking the four DORA metrics (deploy frequency, lead time, change failure rate and MTTR) along with coverage, vulnerabilities and security.
- Authored a technical proposal to standardize AI-agent scaffolding, with documented design and a reference implementation validated on a pilot repository.

Senior to Lead Software Engineer, Ualá *Apr 2022 - Jan 2026*

- Built a cursor-paginated transaction query service (GraphQL-style) with advanced filtering: cut the query from 3 s to 300 ms and the model became a company-wide standard; DynamoDB redesign with -75% app load times.
- Designed lambda-go, an internal serverless framework in Go that standardized the scaffolding of new services: +45% development speed and -60% code-review load.
- Operated the Ualá Bis payments platform (on the order of 1,200 merchants and ~20M transactions/month across 18 microservices and 1,000+ Go AWS Lambda functions), with ~-45% in Lambda execution times and sustained latencies under 100 ms.
- Built internal observability and error-handling libraries (utel, ulog, error_manager) that cut MTTA from 10 to 2 minutes; and ualess, with AI-assisted scaffolding, +20% execution performance.
- Led the technical implementation of batch settlement and the launch of the Link de Pago and PSE payment products for the Colombian market; mentored a team of 3-4 and fostered an AI-first engineering culture.

Software Development Ssr Analyst, Mercado Libre *Feb 2021 - Apr 2022*

- On the Route ETA team, diagnosed a memory leak and rising latency caused by a context that wasn't being cancelled properly in a high-concurrency route-calculation service.
- Migrated to an asynchronous, event-driven HTTP client with a cancelable context: ~20% lower execution times and stabilized memory usage.

Software Engineer, Frávega *Mar 2020 - Feb 2021*

- Took part in migrating the logistics system from a centralized COBOL process to an event-orchestrated architecture (central orchestrator + Go microservices over Kafka).
- Introduced gRPC for inter-service communication; AWS infrastructure orchestrated with Kubernetes and MongoDB.

Backend Developer, EcomExperts *Mar 2019 - Mar 2020*

- Designed and maintained e-commerce integration backend services on multi-cloud infrastructure (AWS, Google Cloud and Azure).
- Integrated multiple platforms (Shopify, Magento, Linio, Mercado Libre and VTEX) and implemented the Mercado Libre catalog as an early adopter of the first version of its API.

BI Analyst / Programmer, Megaly Tech (and earlier) *2014 - 2019*

- Analysis, modeling and visualization of business data with Python, JavaScript, SQL and QlikView.

AI PROJECTS

- Gitar - Git Agentic Review (personal project): AI-assisted code review, local and pre-commit, with a GitHub pull-request-style experience and pair-programming. Validated with a live demo.
- Mado - Agent orchestration protocol (own R&D): verifiable, deterministic coordination of AI agents based on four axioms.

TECHNICAL SKILLS

Go / Golang (primary), Node.js, TypeScript, Rust. Microservices, distributed systems, serverless, AWS Lambda, event-driven (EDA). gRPC, GraphQL, REST APIs. Kafka, RabbitMQ, SQS, SNS, EventBridge. SQL and NoSQL: DynamoDB, PostgreSQL, MySQL, MongoDB, Redis. Hexagonal, Clean Architecture, DDD. Observability (OpenTelemetry, New Relic, Grafana, CloudWatch). Docker, Kubernetes, Terraform, CI/CD (GitHub Actions). AWS, Azure, GCP. Testing, benchmarking, profiling. AI agents and orchestration, LLMs (Claude, OpenAI, Gemini), AI-assisted scaffolding, AI code review, MCP/ACP, harness engineering. Technical leadership and mentoring. High scale, low latency, fintech.

EDUCATION

Technical Degree in Computer Programming - UNSAM (2017-2020, incomplete). Introduction to Kubernetes - Linux Foundation (in progress).

LANGUAGES

Spanish (native). English: intermediate - solid technical reading and writing; complex real-time conversation in progress.
